A Systems Biology Approach to Understanding Transcription Regulation

Transcription factors are directed to their genomic targets by DNA sequence, local chromatin structure, and protein-protein interactions. These modulators of transcription factor binding are not independent but function both cooperatively and competitively to regulate where transcription factors bind. Understanding how these modulators affect transcription factor binding in vivo remains a major unsolved biological problem.

My laboratory integrates both experimental and computational approaches to: i) investigate transcription factor binding in response to environmental stress, ii) identify and characterize the mechanisms directing transcription factor target selection, iii) determine how developmental signals reshaping in response to environmental stress, ii) identify and characterize the mechanisms directing transcription factor target selection, iii) determine how developmental signals reshape the epigenetic landscape during mouse development, and iv) develop bioinformatics tools to analyze and interpret ChIP-chip experiments.

Professional Profile

Administrative Appointments

- Board of Directors, Co-founder, Public Library of Science (2001 - present)
- Scientific Advisory Board, Canary Fund (2004 - present)
- Scientific Advisory Board, St. Jude Children's Research Hospital (2000 - present)

Honors and Awards

- Medal of Honor, American Cancer Society (2006)
- Curt Stern Award, American Society for Human Genetics (2005)
- Takeda Award, Takeda Foundation (2002)
- Member, National Academy of Sciences (2002)
- NAS Award in Molecular Biology, National Academy of Sciences (2000)

Professional Education

- MD: University of Chicago, (1982)
- PhD: University of Chicago, Biochemistry (1980)
- BA: University of Chicago, Chemistry (1976)

Postdoctoral Advisees

Jamie Bates, Jason Casolari, Azzurra De Luca, Liana Lareau
